

Point-Of-Use Water Heater

Compact, 2.5 gallon water heater designed to provide instant hot water in remote locations where space is limited

Electronic temperature controller with digital display

Long lasting, all stainless-steel tank

120, 208, 240, and 277 single phase voltages available

Fully insulated for maximum efficiency

Adjustable temperature range from 50°F – 160°F

- 6 foot power cord and grounded plug (on 120V models up to 1500W)
- Easy to install and maintain
- Built in drain provided for easy maintenance
- Fast recovery rate for better performance
- 10-year non-pro-rated tank warranty

Applications

Correctional facilities, wet bars, coffee stations, limited space washrooms, lavatory sinks, remote locations, food carts, OEM applications and more.

CE25

A long lasting, trouble-free water heater

The Hubbell Endurance CE25 is a compact, point-of-use water heater that is the perfect solution for remote locations where hot water is necessary, but space is limited. The CE25 has a 2.5-gallon storage tank and multiple kilowatt options available. Simple plug and play operation with 120V models make the CE25 easy to use and install, while an electronic temperature controller and digital display provides accurate, reliable, and energy efficient operation. The rugged construction of the CE25 also ensures trouble-free operation and a long lasting, trustworthy source for hot water.

Over 100 years of water heating expertise

Hubbell water heaters are the right choice for your commercial and industrial applications. We have water heating solutions for most energy sources with storage capacities from 1–10,000 gallons — all designed, engineered, and manufactured for reliability and longevity coupled with unparalleled support and service.

Heater Sizing Formula

Required Variables:

- A. Water usage in GPH
- B. Supply water temp in °F
- C. Desired water temp in °F
- D. Calculate the ΔT (temp rise) by subtracting C - B in °F

Formula to Determine kW:

$$\boxed{A} \text{ GPH} \times \boxed{D} \text{ } ^\circ\text{F } \Delta T \times 0.00244 = \boxed{} \text{ kW}$$
