

# **Ceiling Hung Horizontal Water Heater**

19, 30, 40, 55 gallon capacity, all voltages, single or three phase made specifically to be ceiling hung

Space saving horizontal ceiling hung tank requires minimal clearance and no floor space

Simple tie rod installation eliminates expensive and cumbersome mounting shelves

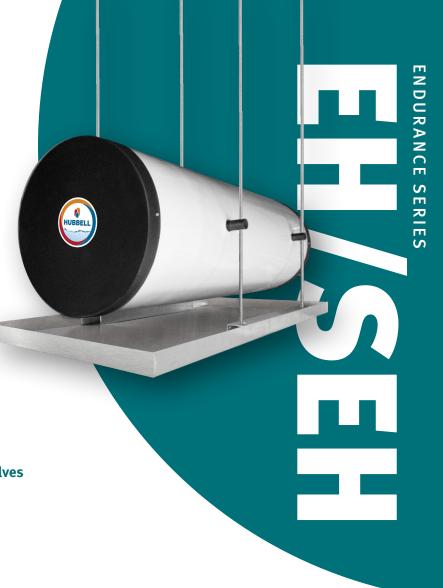

HydraStone™ cement lining provides long tank life

- High impact composite jacket cannot rust or corrode and eliminates damage during transit and installation
- Available in the 4 sizes that work best for ceiling hung water heaters
- Immersion adjustable thermostat provides accurate temperature control
- Full five (5) or optional ten (10) year non pro-rated tank warranty

#### **Applications**

Commercial residential, office buildings, renovations, tenant work, restaurants, executive showers, multiple lavatories, areas with little or no available floor space, and much more.

For horizontal non-ceiling hung commercial and industrial water heaters, see our Endurance E and Endurance SE brochures.

#### A space saving water heater that's easy to install

Today's design requirements put a premium on floor space for many commercial applications. Designed specifically for installation above a drop ceiling, the Hubbell Endurance EH and SEH water heaters address space utilization issues. The integrally welded mounting assemblies provide quick and efficient job site installation without the need for cumbersome and expensive structural platforms.

#### Over 100 years of water heating expertise

Hubbell water heaters are the right choice for your commercial and industrial applications. We have water heating solutions for most energy sources with storage capacities from 1-10,000 gallons all designed, engineered, and manufactured for reliability and longevity coupled with unparalleled support and service.

## The Difference: HydraStone™ Cement Lining

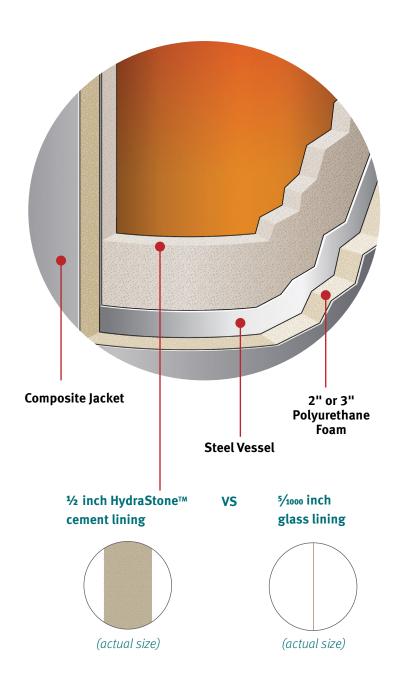

Cement lined tanks offer significant longevity, trouble-free operation and a lower lifetime cost.

The type of protective lining is the single most important feature when determining the quality of any water heater. The ability of a lining to protect the steel tank is primarily based on its thickness and complete coverage of all steel surfaces.

A glass lined tank uses only 5/1000 inches of glass (the thickness of a sheet of paper) which does not cover all internal surfaces. To compensate, all glass lined tanks require a sacrificial anode rod which must be periodically inspected and replaced.

Our tanks are lined with a minimum of ½ inches of high density HydraStone cement — 100 times thicker than glass lining. Full coverage is achieved by injecting the precise amount of HydraStone cement into each tank and then centrifugally spinning it at 250 RPM to ensure complete and uniform coverage. This process provides maximum protection from the corrosive effects of hot water. Additionally, cement lined tanks do not require a sacrificial anode, eliminating periodic inspections and replacement costs associated with glass lined tanks.

Our water heater tanks are constructed with solid non-ferrous copper-silicon tank tappings which are impervious to the corrosive effects of hot water. Glass-lined tanks have steel tappings which are vulnerable to corrosion.

# **Heater Specifications**

| Tank                | UnderStone coment lined steel     |
|---------------------|-----------------------------------|
|                     | HydraStone cement lined steel     |

### **Standard Features**

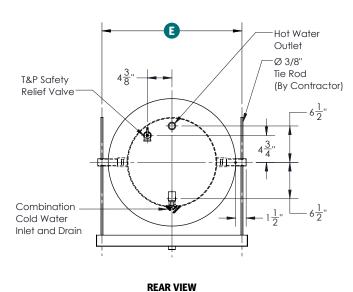

- 1/2" thick HydraStone cement lining
- Four (4) integrally welded factory installed mounting assemblies
- Commercial grade immersion heating element
- Immersion thermostat (100–180°F range)
- Surface type safety hi-limit cut out with a manual reset button (190°F)
- ASME/CSA rated combination temperature and pressure relief valve set at 150 psi and 210°F
- Polyurethane foam insulation meets or exceeds the requirements of ANSI/ASHRAE/IESNA 90.1
- High impact non-corroding colorized composite protective jacket

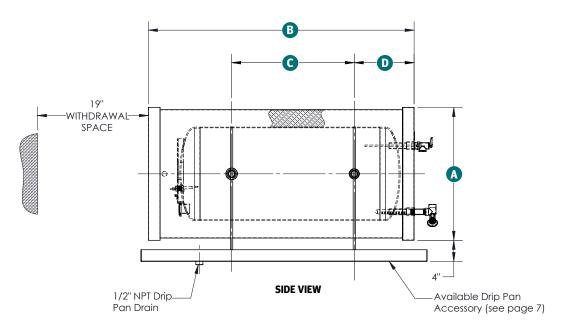

# **Dimensions**

\*Contactor standard on 3 phase models only.

Not available in 20 gallon tanks

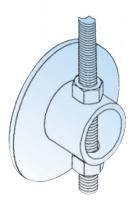

Not available in 20 & 30 gallon tanks

For alternative voltages and kilowatt ratings please consult factory.

Note: 1 kW will heat 4.1 GPH at a 100°F Rise (40-140°F)

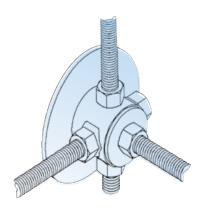

<sup>\*277</sup> volt available in Single Phase only.

#### **Standard Mount**

The standard mount for the Endurance EH/SEH allows the tank to be hung based on your requirements, making installation easy. The water heater is tucked into the space between ceiling joists instead of taking up valuable and limited space. The mount is welded to the tank, all that is required by the contractor is a 3/8" diameter tie rod.

### **Sway Resistant Mount**

In areas subject to seismic activity, the optional sway resistant mount provides security and stabilization.
