

BACnet Module Configuration

Devices that are compatible with this process are:

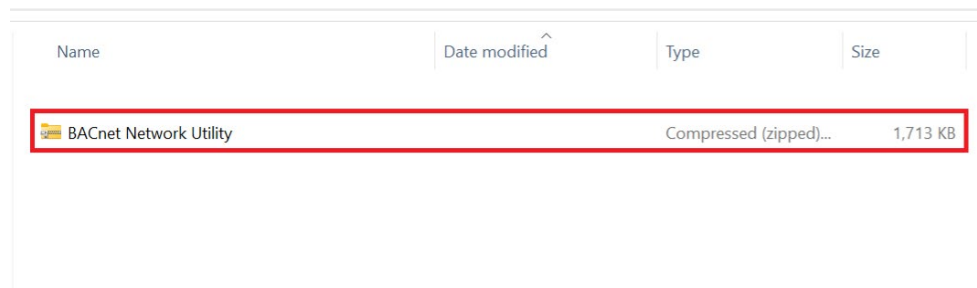

316-00009-00 T1000 Control Assembly

316-00010-00 ETC Control Assembly

316-00016-00 TK2000 Control Assembly

Access Hubbell Website at <https://hubbellheaters.com/> (*location TBD*) for download BACnet Network Utility.zip

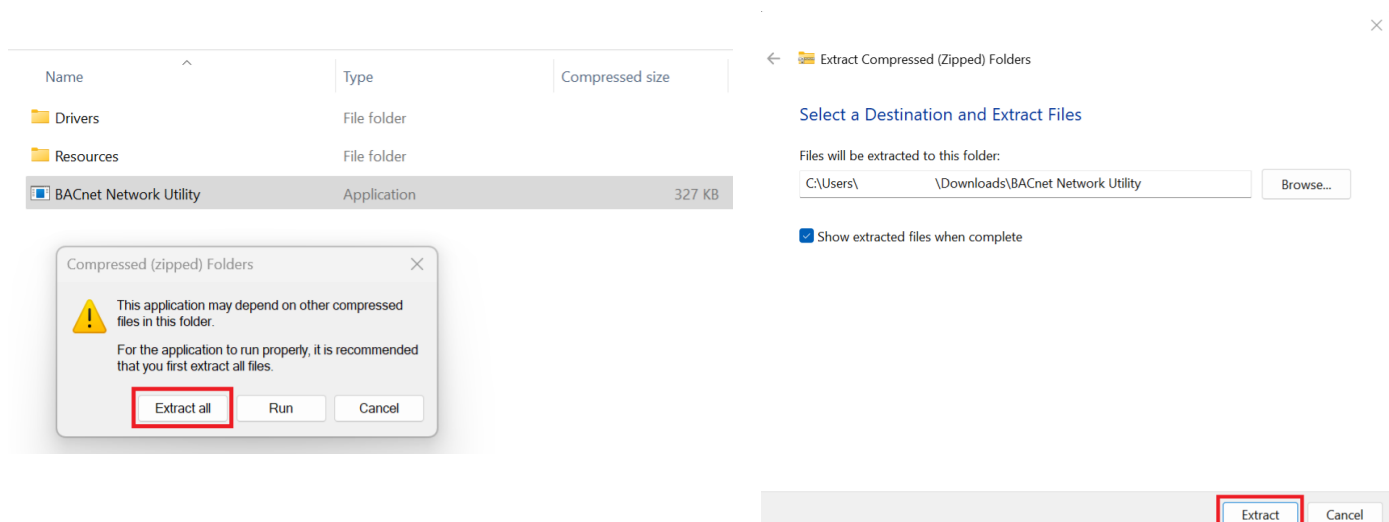

1. After downloading BACnet Network Utility.exe, locate compressed BACnet Network Utility file and open it

2. From inside the file, launch the BACnet Network Utility application.

3. When prompted click 'Extract all' and then click 'Extract'

4. Open the extracted BACnet Network Utility file and run the BACnet Network Utility application

5. Plug an A to mini-USB cable (Hubbell cable part number 319-00008-00) into a powered USB computer port and connect the BACnet module (shown in figure 1).

Figure 1.

6. MAC Address (shown in figure 2)

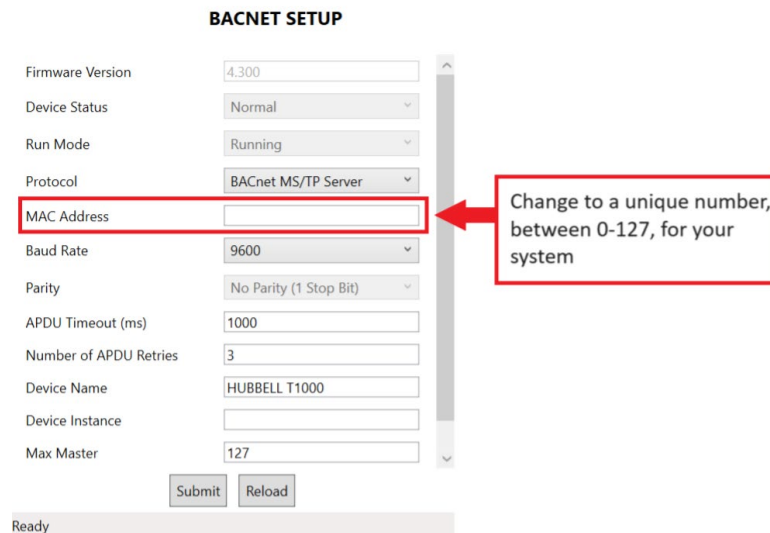

Figure 2.

7. Device Instance (shown in figure 3)

BACNET SETUP

Firmware Version	<input type="text" value="4.300"/>
Device Status	<input type="button" value="Normal"/>
Run Mode	<input type="button" value="Running"/>
Protocol	<input type="button" value="BACnet MS/TP Server"/>
MAC Address	<input type="text"/>
Baud Rate	<input type="button" value="9600"/>
Parity	<input type="button" value="No Parity (1 Stop Bit)"/>
APDU Timeout (ms)	<input type="text" value="1000"/>
Number of APDU Retries	<input type="text" value="3"/>
Device Name	<input type="text" value="HUBBELL T1000"/>
Device Instance	<input type="text"/>
Max Master	<input type="text" value="127"/>

Ready

Change number to match last 5 digits of tank serial number

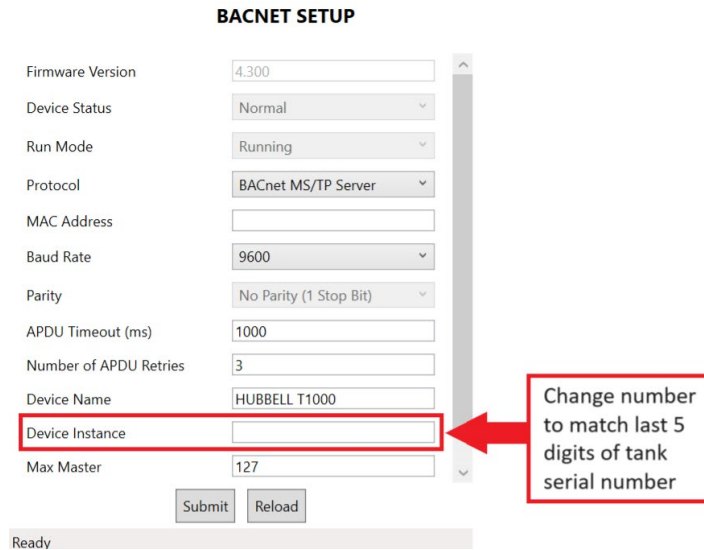

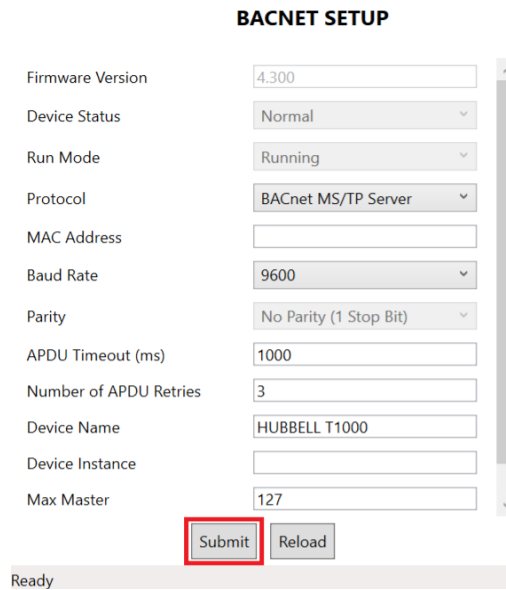

Figure 3.

8. Once changes to the MAC Address and Device Instance are made, hit submit
